PROJECTS

TODO LIST

Designed and developed using MongoDB, Express.js, React.js, and Node.js. Implemented essential task management features including task creation, editing, deletion, and status updates, ensuring responsiveness and smooth user interaction, across devices.

Learning Module System(Full Stack web App) :

Designed and developed a scalable full-stack web application with a user-friendly interface for submitting and managing work updates via file uploads. Implemented complete authentication and role-based authorization for users and admins, ensuring secure access and efficient record management.

Key Features: File Upload Functionality

- User Authentication & Authorization
- Admin Dashboard
- Role-Based Routing
